

# ACCREON HEALTH CLOUD for PointClickCare

## Bridging the Information Gap Between Skilled Nursing and Acute Care Providers

*“Accreon is our premier PointClickCare API development partner and helped build many currently available APIs. The Accreon team can quickly and efficiently leverage the APIs and help bring solutions to the PointClickCare marketplace.”*

**Nikita Tarakanov**  
Product Manager, PointClickCare

### Are You Overlooking Some of Your Most Vulnerable Patients?

Whatever the setting, skilled nursing facility (SNF) patients are among the most vulnerable and demanding—characterized by high rates of chronic conditions, life-threatening events, and complex disease management and medication regimes.

For hospitals and outpatient providers, they pose significant challenges for quality-of-care, risk management, quality metrics, optimized reimbursements and value based payments—potentially costing hospitals significant revenues. Yet, without cross-enterprise communications, physicians are presented with a dangerously incomplete view of their medical histories. For this population in particular, what you don’t know can hurt you. Both patients and providers are at risk.

### Closing the Gap in Care Coordination

Leveraging decades of complex integration experience, the Accreon Health Cloud provides an answer. Its fully-managed *integration platform as a service (iPaaS)* seamlessly supports patient data exchange beyond the SNF setting.

For hospitals and integrated care delivery networks, in particular, our deep experience as a PointClickCare development partner, as well as our integration experience with leading EHR solutions ensures that we can deliver interoperability between acute care and long-term post-acute providers from skilled nursing facilities, rehab centers, and senior care networks. Our solution combines the benefits of cloud deployment with a full spectrum of services including customized implementation, maintenance and support. The Accreon Health Cloud is purpose-built to provide the connected care you need with ease.

## Why iPaaS with Customized Service

- Return time to your IT staff and make the most of your existing budget
- Leverage specialized expertise and an economy of scale to control labor, hardware and software costs
- Reduce time to completion
- Shift all capital expenditures to an operating budget
- Ensure ongoing reliability and support future upgrades and system expansion

### View More. Do More. Get More.

Imagine viewing an SNF heart patient's medication list immediately upon admittance to the hospital. Imagine the potential consequences when you can't. Also, consider that one in six SNF patients is readmitted to a hospital within 30 days of discharge.

The Accreon Health Cloud closes the care coordination gap, enabling access to the robust historical data that drives better inpatient decision-making, safety and care. Communicating patient data and discharge instructions back to the SNF, it helps enhance follow up care and reduce preventable readmissions. Throughout the patient care journey, get more—more robust integrated data means more informed, integrated care—driving better

quality metrics and greater reimbursements for any accountable care organization.

### A Comprehensive Answer for Comprehensive Care

Your IT staff is always in high demand, and interface projects call for significant time for development, testing, re-testing, monitoring, maintenance and upgrades. Enough is never enough. Accreon removes the challenges, complexities and costs of developing and maintaining specialized interfaces in-house—from costly consultants to staffing, training, maintenance and upgrades. Residing in a secure HIPAA-compliant cloud, our solutions leverage the technology and cost-savings advantages of an economy of scale but are customized to your needs. They shift payment from a capital expense to an operating budget. With our experts on your team, the system can be set up and running in days, not months.

### An End-to-End Solution

Accreon begins the project by working with you to define your data sources and destinations—formats, mapping and processing rules. Using this information, we build and rigorously test your interfaces. Then we plan and implement the migration and interface activation, followed by ongoing monitoring and maintenance. Our comprehensive solution supports all formats, from HL7, FHIR, to custom connections.

### Poised for the Future

The Accreon Health Cloud is constantly monitored and scalable. Our specialized staff is always available to add new connectivity and optimize interfaces for your evolving IT infrastructure, while ensuring that your existing connectivity functions flawlessly.
